

— RESEARCH-LED AI & ENGINEERING STUDIO

Scale your business with *AI that delivers.*

Custom AI agents, predictive systems, and cloud platforms engineered to automate what slows you down — and prove their value in measurable outcomes, not promises.

§ 01 — WHO WE ARE

AI should solve problems, *not create new ones.*

“ We are an AI & engineering studio for leaders who are tired of pilots that never reach production. Every system we build has one job — to move a number that matters to your business — or we don't ship it.

01 / 03

SPEED TO VALUE

Weeks. *Not quarters.*

Compressed discovery, scoped to one outcome that moves the business, delivered in production iterations — never a six-month pilot that quietly drifts off the roadmap.

02 / 03

ACCOUNTABILITY

Numbers, *or it doesn't ship.*

Every system has a baseline and a target before a single line of code. If the model isn't beating the metric we signed on, it doesn't go live — even when the demo looks good.

03 / 03

GOVERNANCE-
READY

Audit trails, *not black boxes.*

Traces, evals, and guardrails are built in from day one — so security, legal and risk teams aren't surprised when the system reaches production.

§ 02 — WHERE MOST OF OUR WORK BEGINS

Agents that handle the repetitive work — *so your team doesn't.*

Most enterprises don't have an "AI problem" — they have a **workflow problem**. Repetitive tickets, slow approvals, data trapped in PDFs, status updates copy-pasted between systems. Wiqonn agents quietly run those workflows around the clock and only surface the work humans actually need to touch.

— Type 01

Operational agents

Replace the human spreadsheet shuffle.

Triage tickets, route approvals, reconcile data across ERP, CRM and spreadsheets — turning repetitive ops headcount into measurable throughput.

— Type 02

Document & knowledge agents

Read everything. Forget nothing.

Read contracts, RFPs, invoices and internal docs. Extract structured data, answer questions with citations and feed your downstream systems on demand.

— Type 03

Decision-support agents

A second opinion at scale.

Predictive models wrapped in an agent layer — forecasting, anomaly detection, recommendations — delivered inside the tools your team already uses.

— Type 04

Customer-facing agents

Available the moment a customer asks.

Support, sales and internal copilots grounded in your data — built with retrieval, evaluation harnesses and guardrails, not vibes.

— ALWAYS-ON

Runs 24/7.

No rotations to staff, no off-hours coverage gap.

— AUDITABLE

Every step logged.

Replayable trace for risk & legal, from week one.

— YOURS

Your stack, your rules.

Deploys in your cloud or on-prem, on your data, under your governance.

§ 03 — WHAT WE BUILD

Four ways we move *your* numbers.

Real impact rarely comes from a single piece of tech. We bring AI, data, infrastructure and software under one roof so the result on your desk is one working system — not four invoices to integrate.

CAP / 01

AI & Automation

Take the repetitive work off your team's plate. We build AI that runs the boring parts of the business 24/7 so your people focus on the decisions only humans should make.

- AI agents that automate end-to-end processes
- Prediction models tuned on your own data
- Computer vision for quality & inspection
- Smart copilots grounded in your knowledge base
- Private, on-prem AI when your data can't leave the building

CAP / 02

Business Intelligence

Stop running the business from a spreadsheet. We turn the data scattered across your tools into dashboards that answer the questions your leaders actually ask in the next meeting.

- Executive dashboards built around your real KPIs
- Automated reports — hours back to your team
- Real-time alerts when the numbers drift
- One source of truth across ERP, CRM & warehouse

CAP / 03

Cloud & Infrastructure

The foundation everything else runs on — fast, secure, ready to grow. We set it up so your team never has to wake up at 3am because the system fell over.

- Multi-cloud setup (AWS · Azure · Google Cloud)
- High availability — your systems stay up
- Security & data handling done right by default
- Costs sized to what you actually use

CAP / 04

Custom Development

Software shaped around how your business actually operates — not generic templates with your logo on top. From an internal tool to a customer-facing product, built to last with AI woven in.

- Mobile & web applications with AI built in
- APIs that connect your tools cleanly
- SaaS platforms ready to ship to your customers
- Code that stays yours — no vendor lock-in

§ 04 — WHERE WE BUILD

Domains where AI moves *real* numbers.

A snapshot of the domains where Wiqonn's AI, data and engineering work makes a difference. Every engagement is shaped to your actual sector and the specific metric that matters to you.

— DOMAIN01

Financial Services

Risk scoring, fraud detection, KYC/AML document automation, and BI for treasury & ops.

— DOMAIN02

Education & EdTech

Student acquisition & enrollment copilots, learning analytics, content generation, and dashboards for academic ops.

— DOMAIN03

Energy & Utilities

Predictive maintenance, demand forecasting, grid & asset optimization, and dashboards for distribution networks.

— DOMAIN04

Logistics & Supply Chain

Demand forecasting, route & load optimization, anomaly detection across distributed operations.

— DOMAIN05

Retail & E-commerce

Personalization, loyalty & churn-risk models, demand forecasting, and shopping copilots grounded in your catalog.

— DOMAIN06

Manufacturing & Industrial

Computer vision for QA, predictive maintenance, and edge-deployable models for the plant floor.

— DOMAIN07

Public Sector & Government

Historical spend analysis, pattern detection on legacy records, dashboards for evidence-based policy calls.

— DOMAIN08

Professional Services & Agencies

Lead scoring & conversion copilots, document & proposal automation, and BI for revenue and client ops.

§ 04.B — BUILT FOR PROCUREMENT & LEGAL

Trust posture, *by default*.

— DATA SOVEREIGNTY

Your data, your infrastructure

Deploy the full stack in your cloud, on-prem or private VPC. Your keys, your retention. Data never trains a public model.

— PRIVATE AI

Local models. No internet required.

On-prem LLMs, on-device vision and fully air-gapped pipelines for the most sensitive workloads — zero public API calls.

— IP & COMPLIANCE

You own the work, audit-ready

Source, models and pipelines transfer at delivery. Architectures aligned with GDPR, HIPAA and SOC2.

— AUDIT TRAIL

Every decision is traceable

Traces, evals and guardrails always-on. Risk & legal get a replayable audit log from week one.

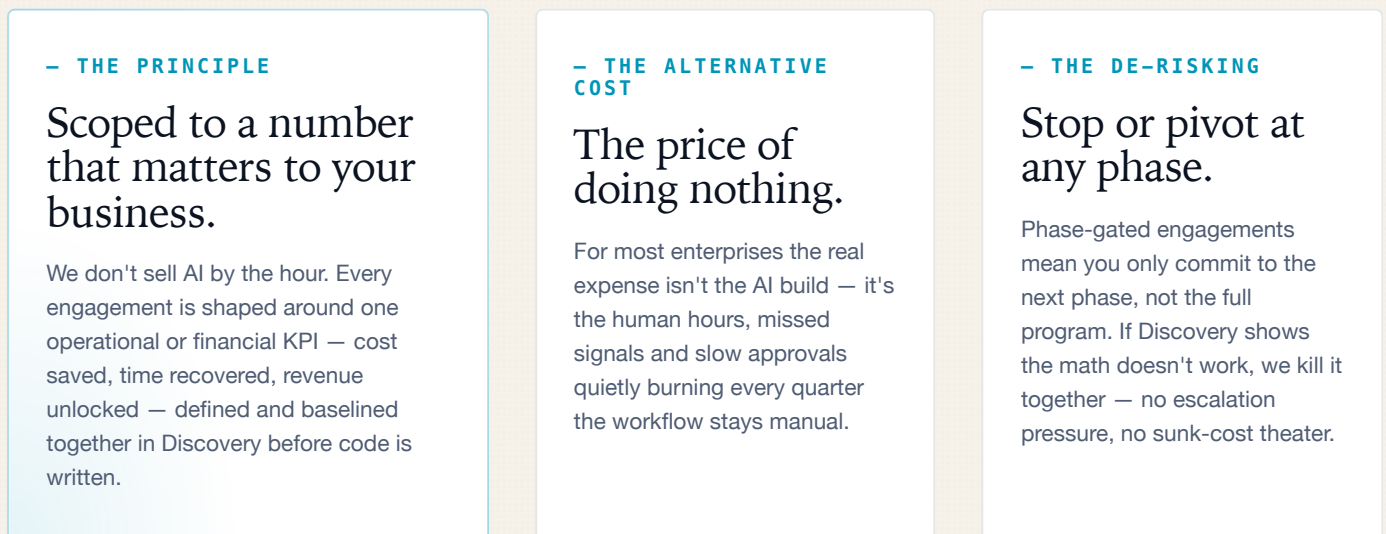

§ 05 — HOW WE WORK

Three phases. *No surprises.*

Predictable cadence, fixed-scope phases, decision gate at every step. You can stop, pivot, or scale at any phase without contractual penalty.

§ 05.B — How AI pays for itself

§ 07 – NEXT STEP

Tell us what's slowing you down. We'll *tell you* if we can help.

No pitch. No 60-slide deck. A real conversation — usually 30 minutes — to see if there's a measurable problem we can ship a solution for inside a quarter.
